"URL Logistics"

Abstract

The project entitled **"URL Logistics"** is done for the company named **"URL Logistics Private Limited"** which is an exclusive transportation service company located at G.N. Palayam, Villianur Main Road, Pondicherry. The project ensures that the goods are transported from the source to destination in the proper way and things are in control without any problems.

The project work is done systematically to overcome the difficulties in the existing one, which is manual, non – Centralized and being done in Goods Consignment Note, the note contains all the details that are required for transformation of goods from various companies to which they have tie-up.

In order to overcome these problems, an automation tool has to be created which manages the entire process and sees to that the company runs high and no malpractices is done.

The key modules carried out in the system are Payment details, Driver details, Vehicle details,Fuel details and further more.

The main features that are carried out are as follows:

> ➤ Dynamic search content of the transaction details.
> ➤ The user can view all the company details and know the status and requirements of them, by which the needs can be updated.

The system is implemented using VB.NET and MS-Access.
